

Time-frequency domain coherent search from ground-based detector to LISA

Wednesday, 16 October 2024 12:00 (20)

Time-frequency domain coherent search has played a significant role in the analysis of data from ground-based detectors. It does not rely on an accurate waveform and noises model, making it well-suited for identifying unexpected sources. This presentation will introduce the ongoing development of the time-frequency domain coherent search pipeline and explore its potential application to LISA.

Presenter(s) : XU, Yumeng (Universitat de les Illes Balears)

Session Classification : Contributed Talks
